Plant Science, 89 (1993) 227–229
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 89 (1993)

Agrobacterium tumefaciens, peanut, *Arachis hypogaea*, transformation, 93
Agrobacterium, chrysanthemum, transformation, hygromycin resistance, 185
Arachis hypogaea, peanut, transformation, *Agrobacterium tumefaciens*, 93
Asparagus officinalis, carbohydrates, in vitro culture, root development, storage roots, sucrose, 101

Barley (*Hordeum vulgare* L.), trypsin inhibitor, genetic variants, endosperm, 23
Biomass, soybean, carbon dioxide, nitrogenous fertilizer, photosynthesis, chlorophyll, 1
Botrytis fabae, wyerone derivatives, peroxidase, polyphenol-oxidase, faba bean, 161
Brassica napus, *Daucus carota*, *Glycine max*, *GUS* reporter gene, plant protoplasts, transient gene expression, 199

Calcium-binding proteins, pollen, calmodulin, *Pinus yunnanensis*, 5
Callus, cation cotolerance, *Medicago*, 81
Calmodulin, pollen, calcium-binding proteins, *Pinus yunnanensis*, 5
Capsicum annuum L., direct somatic embryogenesis, immature embryos, plant regeneration, 107
Carbohydrates, *Asparagus officinalis*, in vitro culture, root development, storage roots, sucrose, 101
Carbon dioxide, soybean, nitrogenous fertilizer, photosynthesis, chlorophyll, biomass, 1
Carrot cultures, methotrexate resistance, dihydrofolate reductase, cell folates, 215
Cation cotolerance, *Medicago*, callus, 81
cDNA sequences, *Chlamydomonas*, pyruvate formate-lyase, enolase, ribosomal proteins, 55
Cell culture, wheat, transformation, cytology, 209
Cell folates, carrot cultures, methotrexate resistance, dihydrofolate reductase, 215
Chiasmata, lily microsporocytes, meiosis, meiotic gene expression, recombinatory activity, yeast *mei2* promoter, 31
Chlamydomonas, cDNA sequences, pyruvate formate-lyase, enolase, ribosomal proteins, 55
Chlorophyll, soybean, carbon dioxide, nitrogenous fertilizer, photosynthesis, biomass, 1
Chrysanthemum, transformation, *Agrobacterium*, hygromycin resistance, 185
Cis-acting element, histone gene promoter, transient expression, 177
Copper stress, photoacoustic method, photochemical energy storage, photosynthetic oxygen evolution, 221
Cyanogenesis, hydroxynitrile lyase, sorghum bicolor, 127
Cytology, wheat, transformation, cell culture, 209

Daucus carota, *Brassica napus*, *Glycine max*, *GUS* reporter gene, plant protoplasts, transient gene expression, 199
Dihydrofolate reductase, carrot cultures, methotrexate resistance, cell folates, 215
Direct DNA uptake, *Oryza sativa* var. Taipei 309, rice, protoplasts, kanamycin resistant transgenic plants, field trial, DNA hybridisation, neomycin phosphotransferase II (NPTII), gene expression and inheritance, 69
Direct somatic embryogenesis, *Capsicum annuum L.*, immature embryos, plant regeneration, 107
Disease resistant plants, peptide design, genetic engineering, 43
DNA hybridisation, *Oryza sativa* var. Taipei 309, rice, protoplasts, direct DNA uptake, kanamycin resistant transgenic plants, field trial, neomycin phosphotransferase II (NPTII), gene expression and inheritance, 69

Electrophoresis, *Pharbitis nil*, flowering, short-day, night-break, protein, 135
Embryo axis, histochemistry, protein bodies, scutellum, somatic embryogenesis, ultrastructure, 85
Endosperm, trypsin inhibitor, genetic variants, barley (*Hordeum vulgare* L.), 23
Enolase, *Chlamydomonas*, cDNA sequences, pyruvate formate-lyase, ribosomal proteins, 55
Enzyme purification, wheat embryos, poly(A) polymerase, subunit structure, product characterization, glycoprotein, 167

Faba bean, wyerone derivatives, peroxidase, polyphenol-oxidase, *Botrytis fabae*, 161
Field trial, *Oryza sativa* var. Taipei 309, rice, protoplasts, direct DNA uptake, kanamycin resistant transgenic plants, DNA hybridisation, neomycin phosphotransferase II (NPTII), gene expression and inheritance, 69
Floral induction, gibberellic acid, plasmalemma, *Spinacia oleracea*, sterols, 153
Flowering, *Pharbitis nil*, electrophoresis, short-day, night-break, protein, 135

Gene expression and inheritance, *Oryza sativa* var. Taipei 309, rice, protoplasts, direct DNA uptake, kanamycin resistant transgenic plants, field trial, DNA hybridisation, neomycin phosphotransferase II (NPTII), 69
Genetic engineering, peptide design, disease resistant plants, 43
Genetic variants, trypsin inhibitor, endosperm, barley (*Hordeum vulgare* L.), 23
Germination, *Pisum sativum*, leguminosae, nuclei, protein kinase, 13
Germination, phosphoglycerate mutase, *Zea mays*, mRNA, 147
Gibberellic acid, floral induction, plasmalemma, *Spinacia oleracea*, sterols, 153
Glycine max, *Brassica napus*, *Daucus carota*, *GUS* reporter gene, plant protoplasts, transient gene expression, 199
Glycoprotein, wheat embryos, poly(A) polymerase, enzyme purification, subunit structure, product characterization, 167
GUS reporter gene, *Brassica napus*, *Daucus carota*, *Glycine max*, plant protoplasts, transient gene expression, 199

Histochemistry, embryo axis, protein bodies, scutellum, somatic embryogenesis, ultrastructure, 85
Histone gene promoter, *cis*-acting element, transient expression, 177
Hydroxynitrile lyase, sorghum bicolor, cyanogenesis, 127
Hygromycin resistance, chrysanthemum, transformation, *Agrobacterium*, 185

Immature embryos, direct somatic embryogenesis, *Capsicum annuum L.*, plant regeneration, 107
In vitro culture, *Asparagus officinalis*, carbohydrates, root development, storage roots, sucrose, 101

Kanamycin resistant transgenic plants, *Oryza sativa* var. Taipei 309, rice, protoplasts, direct DNA uptake, field trial, DNA hybridisation, neomycin phosphotransferase II (NPTII), gene expression and inheritance, 69

Leguminosae, *Pisum sativum*, germination, nuclei, protein kinase, 13
Lily microsporocytes, meiosis, meiotic gene expression, chiasmata, recombinatory activity, yeast *mei2* promoter, 31

Medicago, cation cotolerance, callus, 81
Meiosis, lily microsporocytes, meiotic gene expression, chiasmata, recombinatory activity, yeast *mei2* promoter, 31
Meiotic gene expression, lily microsporocytes, meiosis, chiasmata, recombinatory activity, yeast *mei2* promoter, 31
Methotrexate resistance, carrot cultures, dihydrofolate reductase, cell folates, 215
Mosaic virus resistance, tomato, somaclonal variation, 113
mRNA, phosphoglycerate mutase, *Zea mays*, germination, 147

Neomycin phosphotransferase II (NPTII), *Oryza sativa* var. Taipei 309, rice, protoplasts, direct DNA uptake, kanamycin resistant transgenic plants, field trial, DNA hybridisation, gene expression and inheritance, 69
Night-break, *Pharbitis nil*, flowering, electrophoresis, short-day, protein, 135
Nitrogenous fertilizer, soybean, carbon dioxide, photosynthesis, chlorophyll, biomass, 1
Nuclei, *Pisum sativum*, leguminosae, germination, protein kinase, 13

Oryza sativa var. Taipei 309, rice, protoplasts, direct DNA uptake, kanamycin resistant transgenic plants, field trial, DNA hybridisation, neomycin phosphotransferase II (NPTII), gene expression and inheritance, 69

Peanut, *Arachis hypogaea*, transformation, *Agrobacterium tumefaciens*, 93
Peptide design, genetic engineering, disease resistant plants, 43
Peroxidase, wyerone derivatives, polyphenoloxidase, *Botrytis fabae*, faba bean, 161
Pharbitis nil, flowering, electrophoresis, short-day, night-break, protein, 135
Phosphoglycerate mutase, *Zea mays*, germination, mRNA, 147
Photoacoustic method, copper stress, photochemical energy storage, photosynthetic oxygen evolution, 221
Photochemical energy storage, copper stress, photoacoustic method, photosynthetic oxygen evolution, 221
Photosynthetic oxygen evolution, copper stress, photoacoustic method, photochemical energy storage, 221
Photosynthesis, soybean, carbon dioxide, nitrogenous fertilizer, chlorophyll, biomass, 1
Pinus yunnanensis, pollen, calmodulin, calcium-binding proteins, 5
Pisum sativum, leguminosae, germination, nuclei, protein kinase, 13
Plant protoplasts, *Brassica napus*, *Daucus carota*, *Glycine max*, *GUS* reporter gene, transient gene expression, 199
Plant regeneration, direct somatic embryogenesis, *Capsicum annuum L.*, immature embryos, 107
Plasmalemma, floral induction, gibberellic acid, *Spinacia oleracea*, sterols, 153
Pollen, calmodulin, calcium-binding proteins, *Pinus yunnanensis*, 5
Poly(A) polymerase, wheat embryos, enzyme purification, subunit structure, product characterization, glycoprotein, 167
Polyphenoloxidase, wyerone derivatives, peroxidase, *Botrytis fabae*, faba bean, 161
Product characterization, wheat embryos, poly(A) polymerase, enzyme purification, subunit structure, glycoprotein, 167
Protein bodies, embryo axis, histochemistry, scutellum, somatic embryogenesis, ultrastructure, 85
Protein kinase, *Pisum sativum*, leguminosae, germination, nuclei, 13
Protein, *Pharbitis nil*, flowering, electrophoresis, short-day, night-break, 135
Protoplasts, *Oryza sativa* var. Taipei 309, rice, direct DNA uptake, kanamycin resistant transgenic plants, field trial, DNA hybridisation, neomycin phosphotransferase II (NPTII), gene expression and inheritance, 69
Pyruvate formate-lyase, *Chlamydomonas*, cDNA sequences, enolase, ribosomal proteins, 55

Recombinatory activity, lily microsporocytes, meiosis, meiotic gene expression, chiasmata, yeast *mei2* promoter, 31
Ribosomal proteins, *Chlamydomonas*, cDNA sequences, pyruvate formate-lyase, enolase, 55
Rice, *Oryza sativa* var. Taipei 309, protoplasts, direct DNA uptake, kanamycin resistant transgenic plants, field trial, DNA hybridisation, neomycin phosphotransferase II (NPTII), gene expression and inheritance, 69
Root development, *Asparagus officinalis*, carbohydrates, in vitro culture, storage roots, sucrose, 101

Scutellum, embryo axis, histochemistry, protein bodies, somatic embryogenesis, ultrastructure, 85
Short-day, *Pharbitis nil*, flowering, electrophoresis, night-break, protein, 135
Somaclonal variation, tomato, mosaic virus resistance, 113
Somatic embryogenesis, embryo axis, histochemistry, protein bodies, scutellum, ultrastructure, 85
Sorghum bicolor, hydroxynitrile lyase, cyanogenesis, 127
Soybean, carbon dioxide, nitrogenous fertilizer, photosynthesis, chlorophyll, biomass, 1
Spinacia oleracea, floral induction, gibberellic acid, plasmalemma, sterols, 153
Sterols, floral induction, gibberellic acid, plasmalemma, *Spinacia oleracea*, 153
Storage roots, *Asparagus officinalis*, carbohydrates, in vitro culture, root development, sucrose, 101
Subunit structure, wheat embryos, poly(A) polymerase, enzyme purification, product characterization, glycoprotein, 167
Sucrose, *Asparagus officinalis*, carbohydrates, in vitro culture, root development, storage roots, 101

Tomato, mosaic virus resistance, somaclonal variation, 113
Transformation, chrysanthemum, *Agrobacterium*, hygromycin resistance, 185
Transformation, peanut, *Arachis hypogaea*, *Agrobacterium tumefaciens*, 93
Transformation, wheat, cell culture, cytology, 209
Transient expression, *cis*-acting element, histone gene promoter, 177
Transient gene expression, *Brassica napus*, *Daucus carota*, *Glycine max*, *GUS* reporter gene, plant protoplasts, 199
Trypsin inhibitor, genetic variants, endosperm, barley (*Hordeum vulgare* L.), 23

Ultrastructure, embryo axis, histochemistry, protein bodies, scutellum, somatic embryogenesis, 85

Wheat, transformation, cell culture, cytology, 209
Wheat embryos, poly(A) polymerase, enzyme purification, subunit structure, product characterization, glycoprotein, 167
Wyerone derivatives, peroxidase, polyphenoloxidase, *Botrytis fabae*, faba bean, 161

Yeast *mei2* promoter, lily microsporocytes, meiosis, meiotic gene expression, chiasmata, recombinatory activity, 31

Zea mays, phosphoglycerate mutase, germination, mRNA, 147
